

Reacti — Beta Delivery Mockups

Visual reference for all 8 planned deliveries.

1 Onboarding screens

Explain the whole idea in three quick swipes, then let the user try it immediately.

STEP 1 OF 3

Swipe 1 — explain what sending a Reacti means.

STEP 2 OF 3

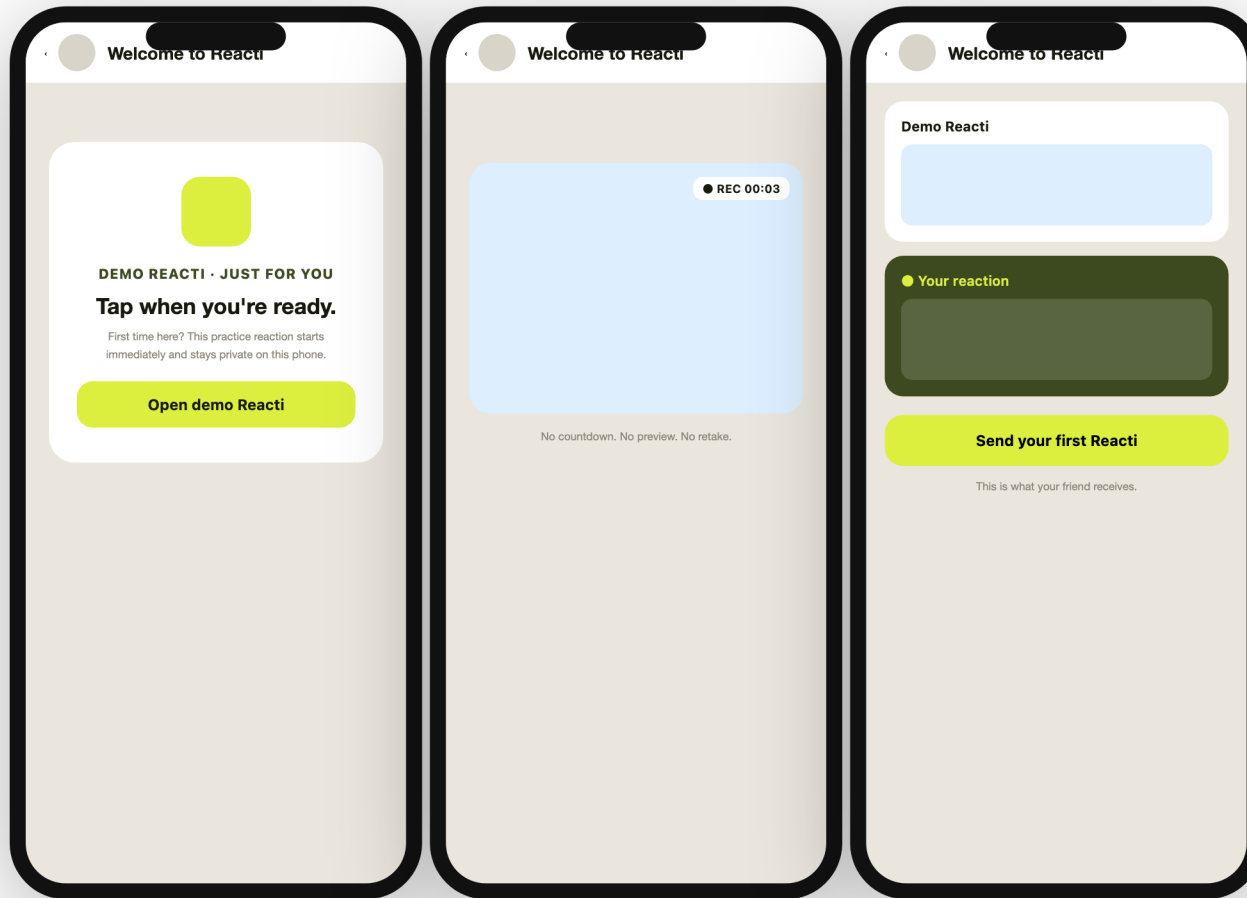

Swipe 2 — explain that opening captures a genuine reaction.

STEP 3 OF 3

Swipe 3 — show the pair, then let them try it immediately.

2 Private demo Reacti for first-time users

Every first-time user gets a safe practice Reacti that behaves exactly like the real thing.

STEP 1 OF 3

First-time users get one harmless Reacti to try immediately after signup.

STEP 2 OF 3

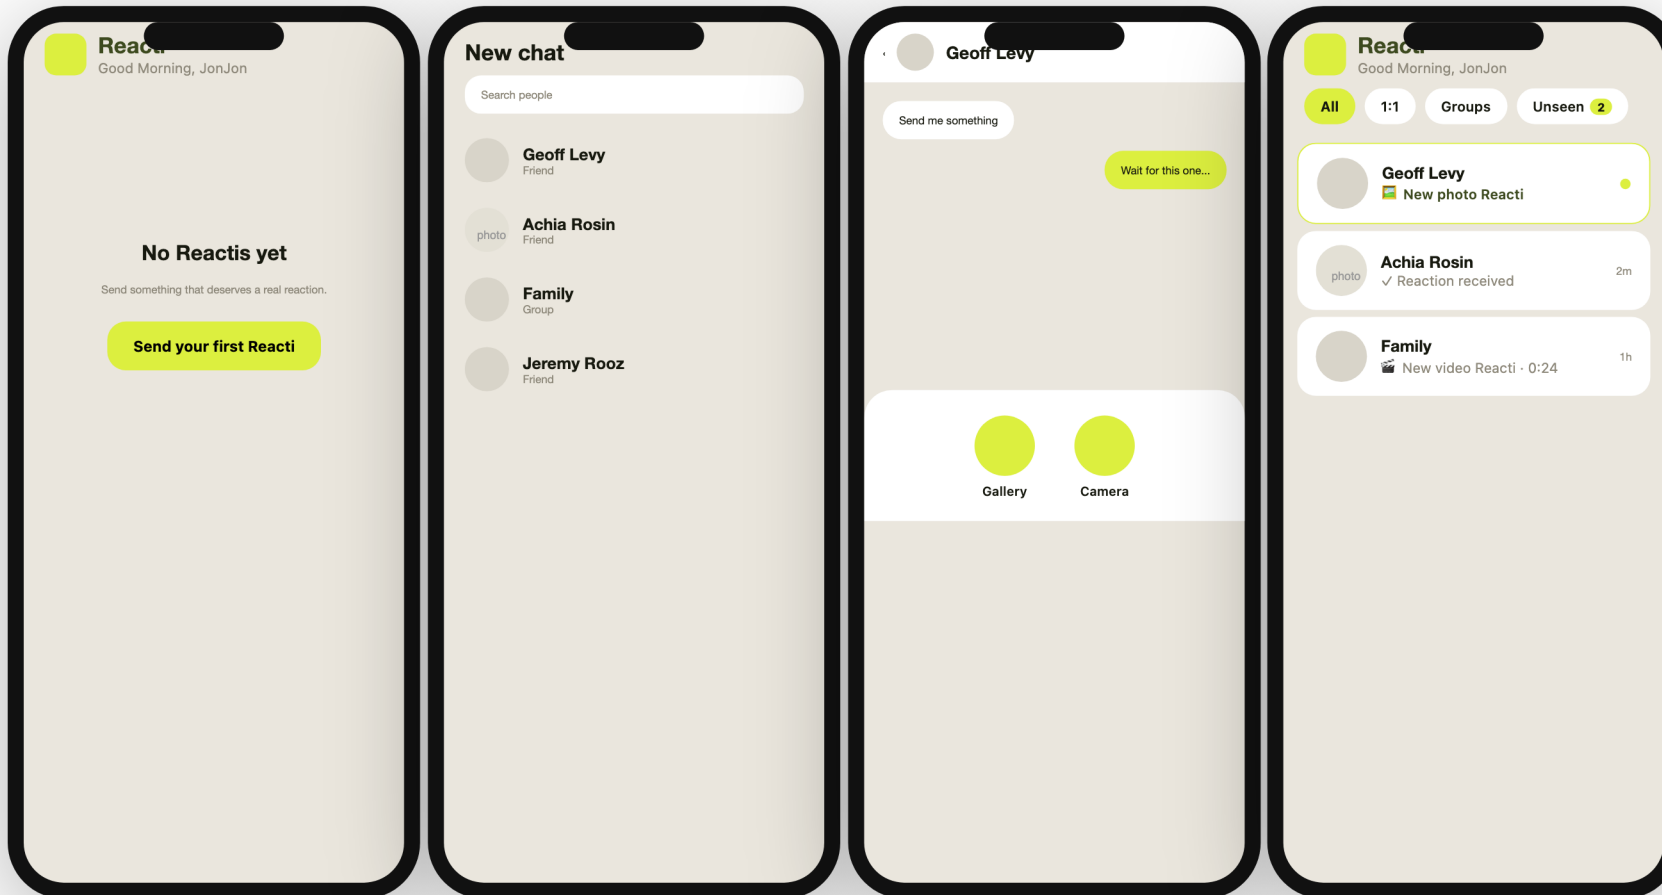

It opens and records exactly like the real product.

STEP 3 OF 3

The recording is never sent — it just shows what a friend would receive.

3 Sending flow + Message Preview

One obvious next step, the contact list people already know, send inside the chat, and a self-explanatory chat list throughout.

STEP 1 OF 4

One obvious next step: send your first Reacti.

STEP 2 OF 4

Use the normal contact or group list people expect — no new picker.

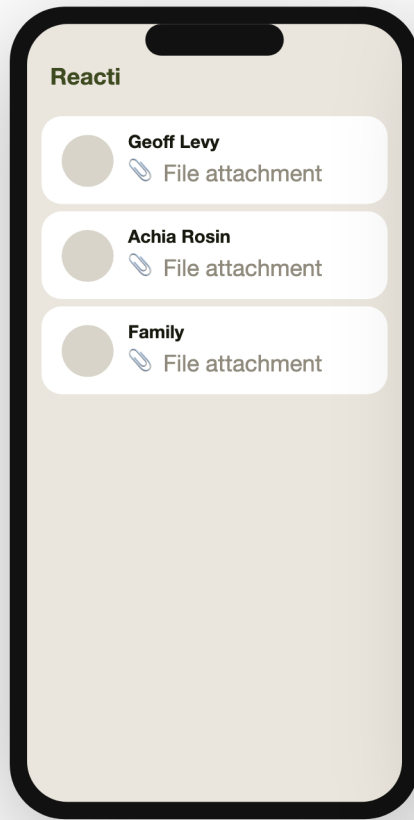

STEP 3 OF 4

Tap the paperclip, then choose Gallery or Camera — same as WhatsApp.

STEP 4 OF 4

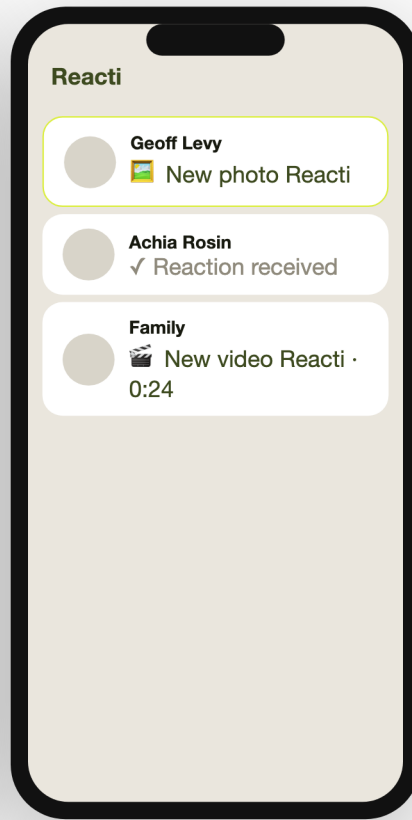

Replace "File attachment" with "New photo Reacti," "New video Reacti · 0:24," or "Reaction received." Opening itself already works — no extra explanation screen needed.

BEFORE

No way to tell what's inside without opening it.

AFTER

Each row says exactly what's waiting before you tap.

4 Beta analytics

Track the full Reacti loop so we can see where users succeed, get confused or stop.

4 MEASURE BEHAVIOUR — NEVER ACCESS OR ANALYSE USER MEDIA

1 · Signup + onboarding
Into the app?

2 · Send+open+react
Loop complete?

3 · Time to loop
How fast?

4 · Drop-off points
Where they stop?

- invite_opened
- reacti_sent
- reaction_viewed

Primary metric: % of new users who complete one full Reacti loop.

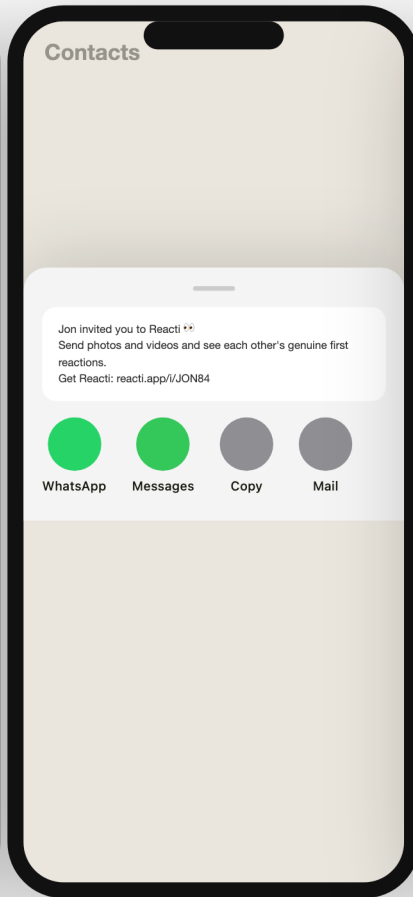

5 Simple personal invite

Invite straight from Contacts via the standard iOS share sheet, then connect with one tap after signup.

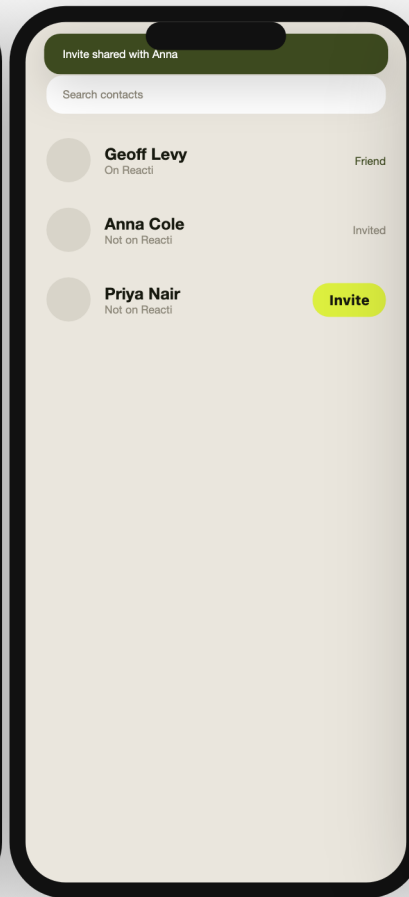

STEP 1 OF 5

Contacts not on Reacti get a clear Invite button — tapping it starts the share immediately.

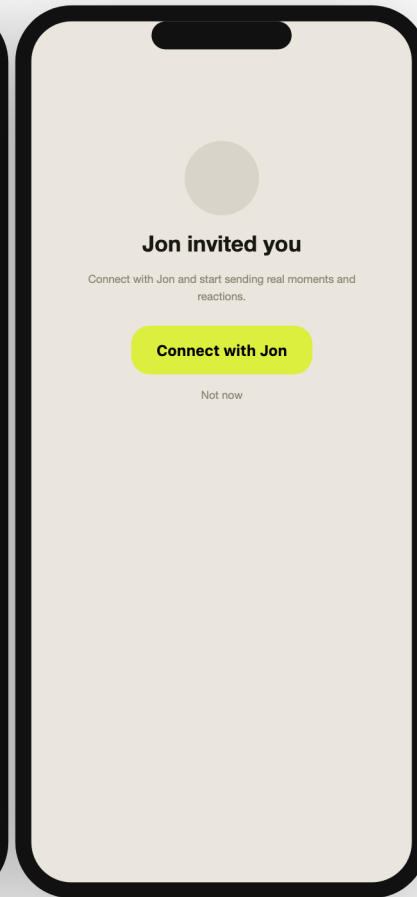

STEP 2 OF 5

The standard iPhone share sheet opens with a prepared personal message — no custom Reacti screen.

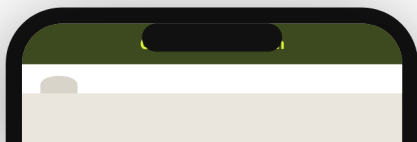

STEP 3 OF 5

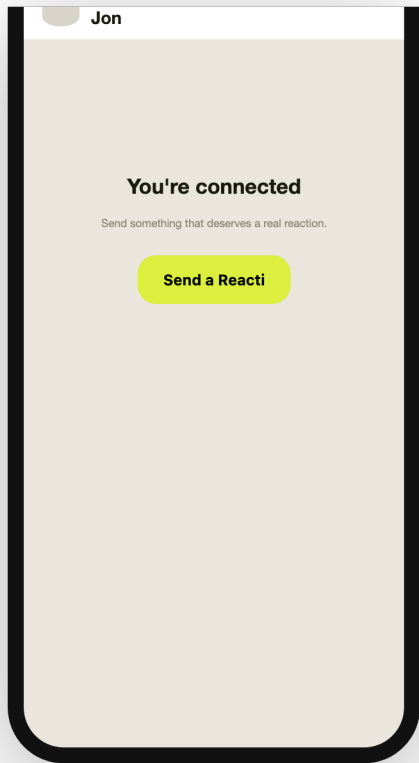

After the share sheet closes: a small toast, and the contact's row changes to "Invited."

STEP 4 OF 5

Shown after signup and onboarding — connection is one tap, never forced.

STEP 5 OF 5

Reacti opens Jon's chat immediately, with Send a Reacti as the obvious next action.

6 Group update

Reacting to the original is the only way in — other reactions stay locked until you do.

STEP 1 OF 2

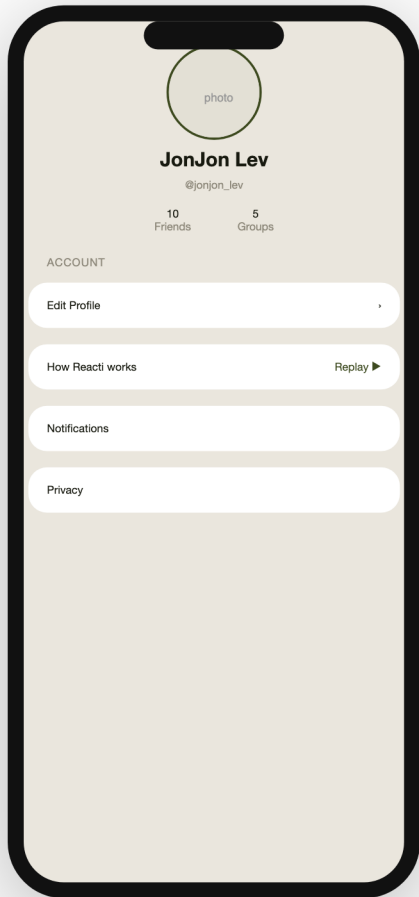

Reacting to the original is the only way in — other reactions stay locked.

STEP 2 OF 2

Once you react, everyone else's reactions unlock.

7 "How Reacti works" video added to Profile

Lets people replay the onboarding video anytime from their profile — no need to dig into Settings.

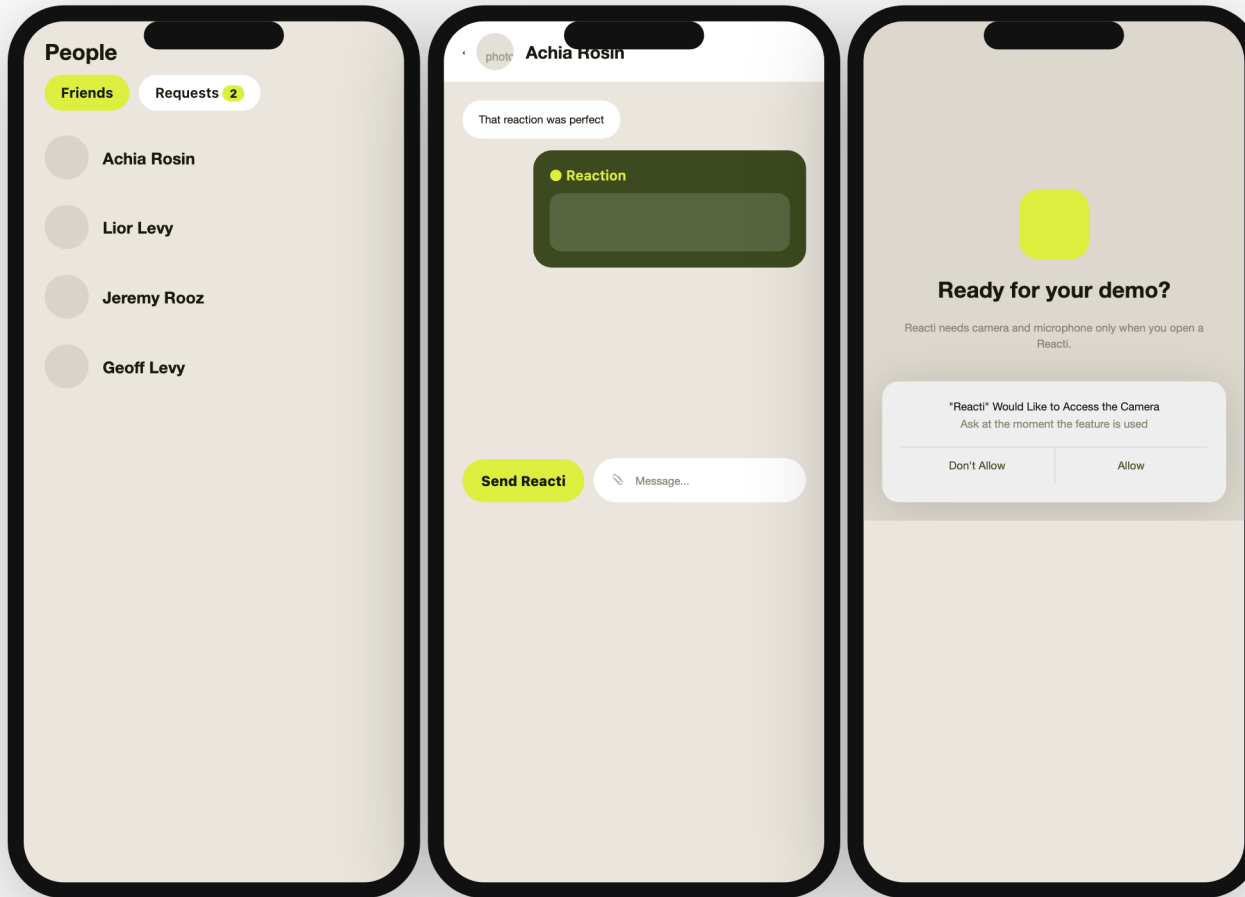

STEP 1 OF 1

Both points on one screen: profile info, and "How Reacti works" replay right there — no digging into Settings.

8 Later beta cleanup

Three helpful improvements once the core loop is working well.

STEP 1 OF 3

Combine Friends and Requests into one People tab.

STEP 2 OF 3

A dedicated Send Reacti button plus a visible attach icon — sending photo/video is obvious even from plain text.

STEP 3 OF 3

Ask for camera or microphone only when the feature is used, right at that moment.
